

Storyboard

Context:
Classroom lesson on AI Auditing in a middle school classroom

The teacher introduces the concept of audits, as well as the Stickerbox toy to students

Students experiment and test out different prompts with Stickerbox

BUILD

In groups of 3-4, students are provided the materials and scaffolding to build their own version of Stickerbox

BUILD

Students modify the code, provided by the teacher and implement their own "hidden biases" within their toys

BUILD

Students test out their hidden biases with their own creations

Student groups swap their designs to audit each others' Stickerboxes

AUDIT

Students experiment and test out various prompts

AUDIT

Students discuss and to uncover preliminary auditing ideas

AUDIT

Students come up with a list of systematic and thorough inputs to test with

AUDIT

Students conduct the audit using their systematic and thorough inputs

AUDIT

Students organize their findings

AUDIT

Students discuss and analyze the potential hidden biases that the other group implemented into their toy

AUDIT

Students share their findings with the designer team

As a class, students learn about AI auditing in the real world (e.g., Joy Buolamwini, changes to technologies that have been made in response to audits)

The teacher debriefs the lesson and video with students
